Design guidelines

-Aim to meet WCAG 2.1 level AA requirements.

-Secondary text(paragraphs) is less important than headings, so it's made less prominent (using size and contrast)) to create a clear visual hierarchy.

-Reduce distractions, remove unnecessary styles.

-Minimeze choice.

-Use conventional design patterns that people are familiar with.

-Indicate interaction states of buttons (Default, Hover, Active).

-create a design system(color, shadow, spacing,border radius,typography).

-Make sure important conetnt is visible.Colors also must ensure sufficient contrast.

-Ensure an interface is accessible.

Rahel Yabebal

Hello! I am a third-year Software Engineering student at Addis Ababa University (AAU.
Currently, I am focused on front-end development, where I bring ideas to life through intuitive and engaging user interfaces.

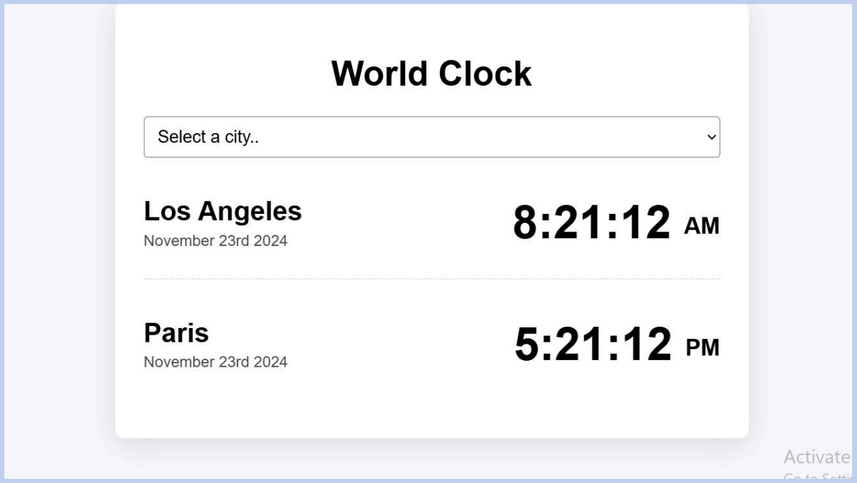
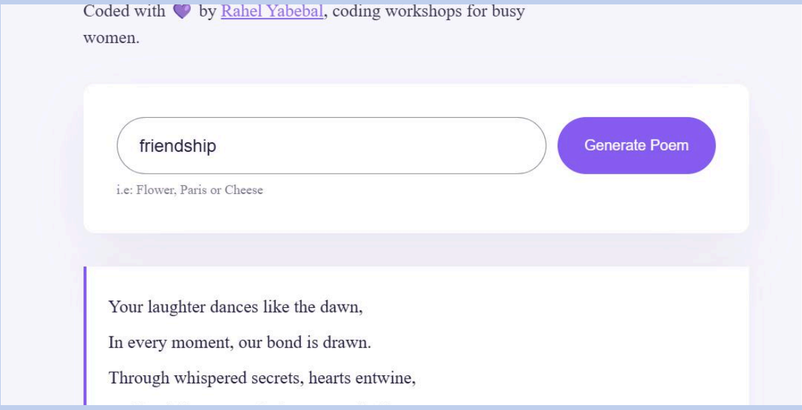
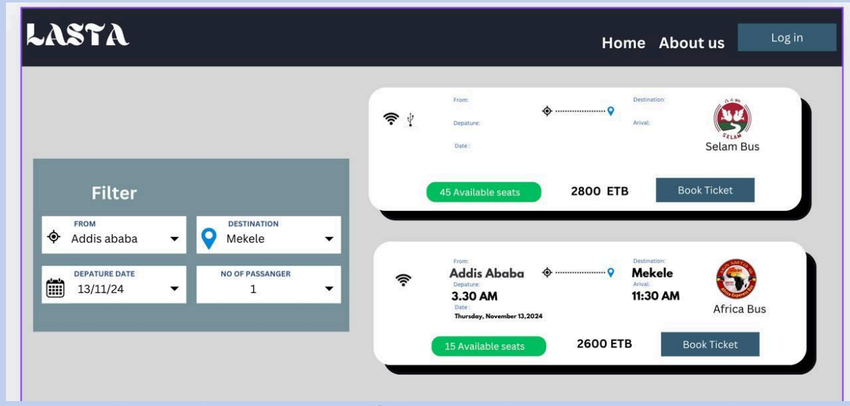
This is a weather-app where people can search for a city and find weather-related information.



This project is a world-clock which shows the timezones in different cities.



This is a poem generator integrated with AI.



currently with a team of 7 members, I am working on building an online cross-country bus ticketing system website.

Education

I am Rahel Yabebal, a 3rd-year software engineering student. I finished high school at Lideta Catholic Cathedral School, and now I am studying at Addis Ababa University (AAU).

I believe in continuous learning and collaboration, and I am always looking for ways to expand my knowledge and take on new challenges. Whether it's building user-friendly applications or tackling complex coding contests, I am dedicated to growth and innovation in the tech field.

Adventures

I want to try these adventures.

Hobbies

Reading Books is one of my hobbies

Intersestes

I enjoy listening to music

Skills

My skills mentioned in the table are the skills I have acquired through various learning experiences and practical applications. These skills encompass a range of technical skills that I have developed over time.
At present, my primary focus is on front-end development. I am dedicating my efforts to mastering HTML, CSS, and JavaScript, as these are the fundamental technologies required for any front-end developer. By honing these skills, I aim to create visually appealing and user-friendly web interfaces that provide an excellent user experience.

python programming	JavaScript
HTML	CSS

Learning Journey

The skills of HTML, CSS, and JavaScript are self-taught through doing projects and watching videos and also some online classes. Learning on our own can be challenging at times. However, with dedication and effort, we can become good at what we're studying.
I took an introductory Python course at Addis Ababa University (AAU), which provided me with a solid foundation in programming concepts and practices. However, my learning did not stop there. I am currently enhancing my Python skills through self-study, working on various projects and challenges to deepen my understanding and proficiency in the language.
